

SRA Plat - Existing Parcel/Lot, creating a Sewage Reserve Area (SRA)

The purpose of this plan is to establish a sewage reserve area (SRA). The SRA as shown is approved for on-site sewage disposal. The health department approval on the plat certifies that the SRA shown hereon is in compliance with the pertinent Health Departments laws and regulations as of the approval date. This approval does not serve as a sanitary construction permit and the property owner is notified that he must still apply for and obtain a sanitary construction permit before developing the property. At the time of permit application the property will be evaluated pursuant to COMAR 26.04.02 and all other applicable laws and regulations. Furthermore, the Caroline county Health Department may require more determinative information about the property including additional testing and evaluation.

Approved: _____
Caroline County Approving Authority
